# THE PRODUCT

This is the Bio360 Biodegradable & Compostable Mulch Film. Made of Mater-Bi®, it completely disappears without a trace and without leaving any toxic residues in the soil. It is an environmentally efficient alternative to traditional plastic mulch films. At the end of the season, the Bio360 does not need to be removed—the temperature, humidity, and microorganisms in the ground turn the Bio360 into water and carbon dioxide. The Bio360 has the same properties and benefits as plastic mulch films, but with no negative impacts on the environment and no removal, recycling or landfill costs.

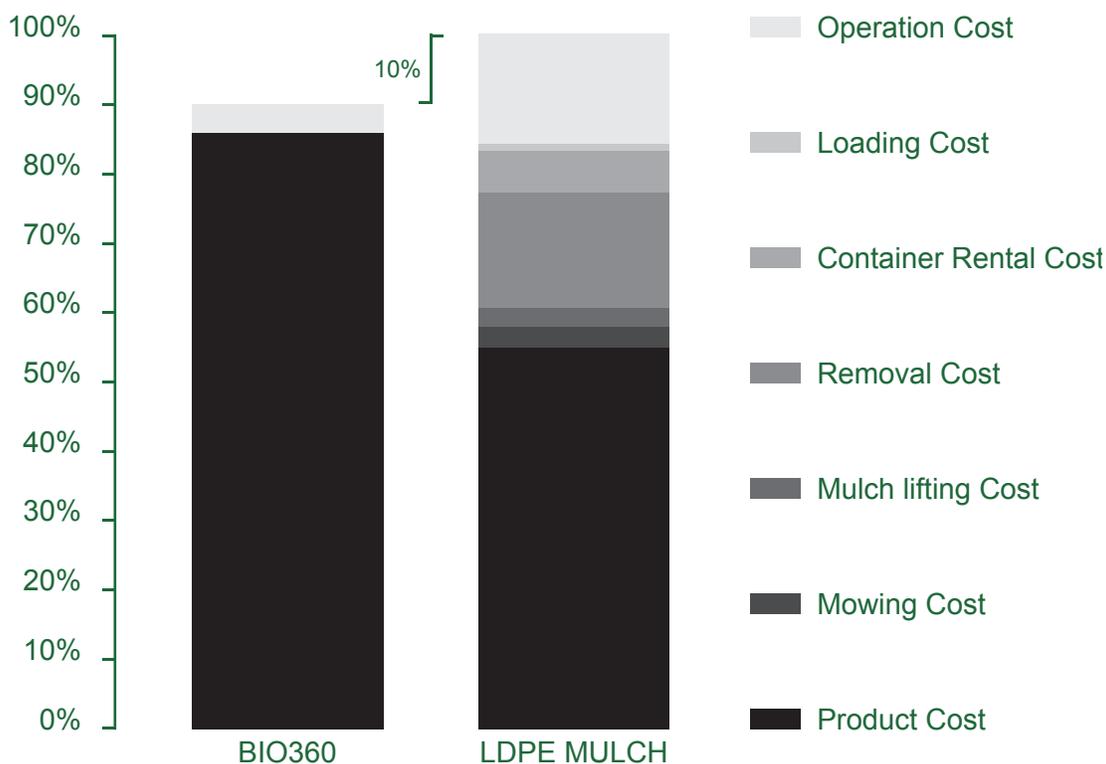

Mater-Bi® is made with renewable resources such as starches from different non-GMO crops: corn and other cereals, potatoes, and vegetable oils. Mater-Bi® complies with international biodegradation and environmental standards such as EN 13432 by Vinçotte and ASTM D6400 by BPI, which guarantee complete biodegradation in soil without any toxic residues.

# THE FACTS

## All the facts

COST COMPARISON: BIO360 VS. LDPE MULCH

# THE FACTS

## All the facts\*

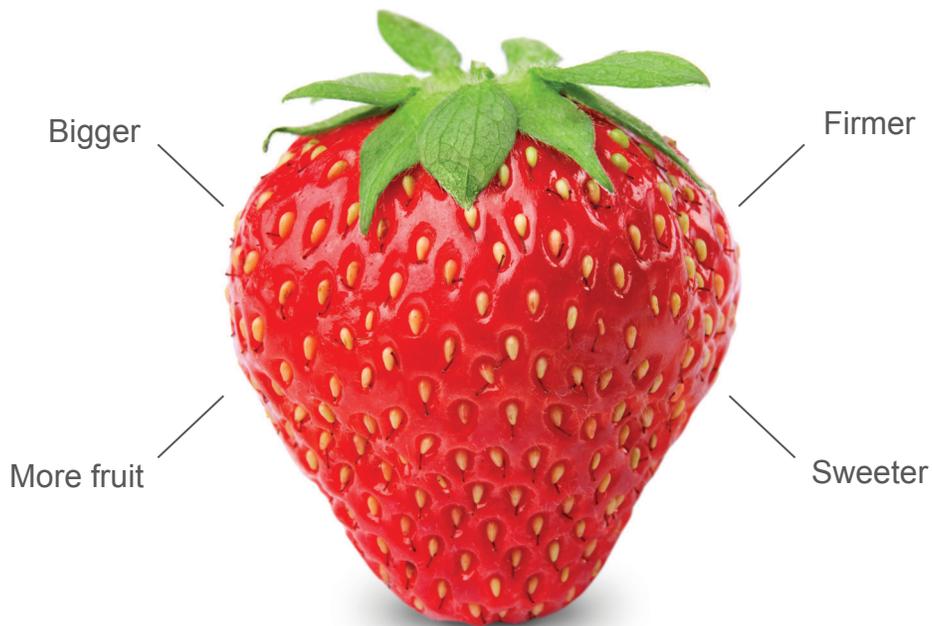

15% higher quantity of marketable production (after 30 days)

15% higher presence of fruits of extra category

10% higher ascorbic acid content

30% more hardness

6% higher sugar content

\*In strawberry mulched with Mater-Bi compared to those mulched with LDPE

## Some of our client's comments

"I started using Bio360 4 years ago and every year I am doing more & more. I used it for my tomatoes, peppers, eggplants and squash, late in the season. I noticed that where it started to degrade, the weeds do not grow afterwards. Also, the Bio360 warms up the soil as good as plastic film."

*King's Sweet Corn & Produce | Parkesburg, Pennsylvania*

"It works, I disc it under at the end of the season and it's gone. I buy more every year and now will use on all plastic applications."

*Drum's produce | Bloomsburg, Pennsylvania*

"I grow 20 acres of vegetables and I am using Bio360. Great product, I tried side by side with oxo degradable, and Bio 360 broken up much better at the end of the season. More expensive but worth the money."

*Garden Spot Greenhouse | Portage, Michigan*

"Bio360 is fantastic, we don't have to pick it up at the end, it's the biggest advantage. Because time we spend to pull up plastic is a nightmare."

*Coverdale Farm Preserve | Greenville, Delaware*

"We love Bio360 it does what it's suppose to do on our sweet potatoes crops, nothing left into the soil after season done."

*Jim Line | Valleys Best | Carlisle, Pennsylvania*
